

## SUMMARY

### THE MAKING AND USING OF A DATA BANK TO CREATE NEW NOSES

This report consists of a description of a nose database once an impression has been taken. The database is a computerized data bank which is a collection of data on noses. The nose database is described in detail.

The nose database was created by taking impressions of noses of a variety of people of different ages and genders. A computerized data bank consists of a number of nose impressions.

Based on the data taken, a nose code system was developed and discussed. The system is a computerized code system. The results of the nose code system are discussed in detail by the means of a number of examples. The system is based on the analysis of a nose impression (the oxygen). The code system is a code and a code number system.

This code can also be used for the fabrication of a nose impression which is a code number of a nose impression.
